STATISTICS

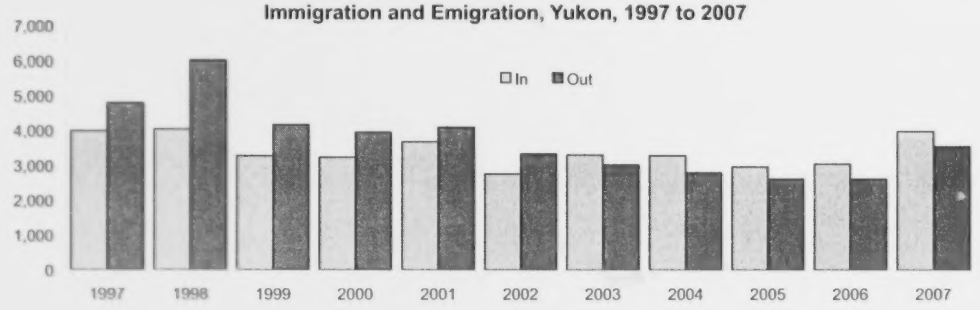
YUKON MIGRATION PATTERNS

1997–2007

Highlights

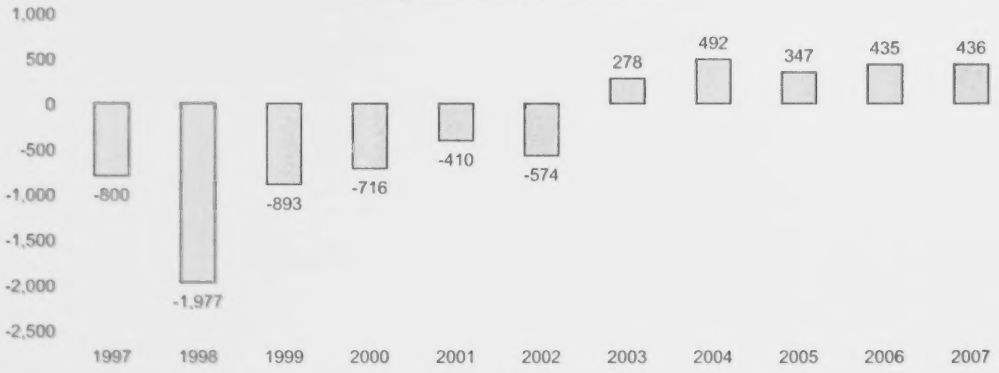
This report examines migration patterns in the Yukon and is divided into three sections. The first section looks at immigration and emigration for the Yukon from 1997 to 2007. It examines both quarterly and yearly migration patterns by gender and age. The second section looks at the median length of residency in the Yukon for out-migrants (those who have moved out of the Yukon during the year and not returned) and non-migrants (those who remained resident in the Yukon during the year) by gender, age and ethnicity. The third section compares continuous length of residency in the Yukon in 2007 with 2002, also by gender, age and ethnicity. All of the migration numbers used in this report are based statistically on the Yukon Bureau of Statistics' population data (which are based on the Yukon Health Care registration file).

Immigration and Emigration, Yukon, 1997 to 2007



In total, from 1997 to 2007, more people have moved out of the Territory than have moved into the Territory, with losses exceeding gains for six consecutive years (1997 to 2002). Subsequently, immigration exceeded emigration from 2003 through 2007. In 2007, 3,547 people emigrated from the Yukon, while 3,983 people immigrated to the Yukon.

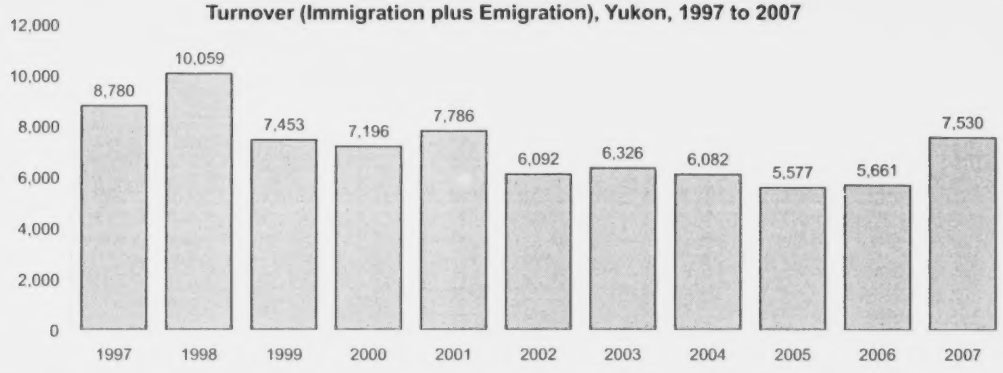
Net Migration, Yukon, 1997 to 2007



Net migration is the difference between the number of people entering the Yukon (immigration) and the number of people leaving the Yukon (emigration). From 1997 to 2007, average annual net migration for the Yukon was -307. Since 1997, the Yukon has experienced six years of population decline followed by five years of population growth. The largest increase in the Yukon population occurred in 2004 when net migration equalled 492, and the largest decrease was in 1998 when net migration was -1,977.

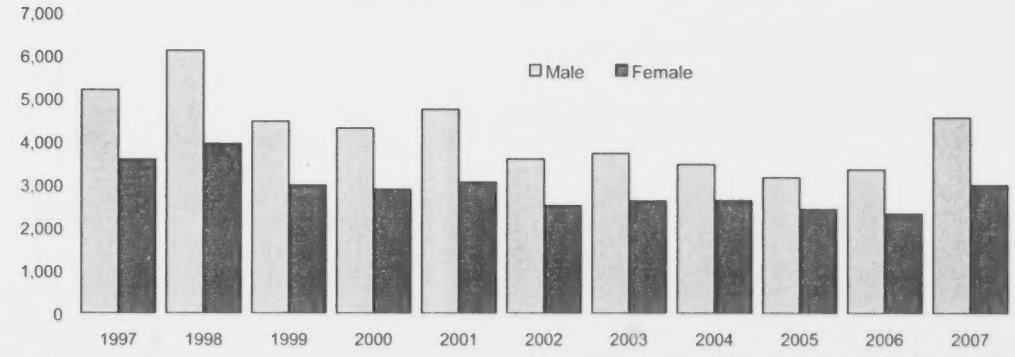
Yearly Turnover

Turnover (Immigration plus Emigration), Yukon, 1997 to 2007



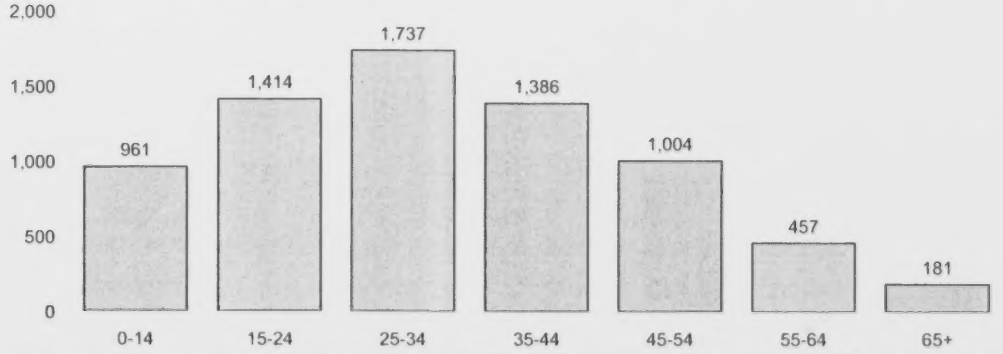
From 1997 to 2007, the average annual turnover (immigration plus emigration) for the Yukon was 7,140. Turnover shows the segment of the population that is mobile and affects things such as the housing market, rental prices and vacancy rates.

Turnover (Immigration plus Emigration) by Sex, Yukon, 1997 to 2007



Since 1997, more men than women moved into or out of the Territory, indicating that in the Yukon men are more mobile than women. From 1997 to 2007, the average annual turnover was 4,240 for men and 2,900 for women.

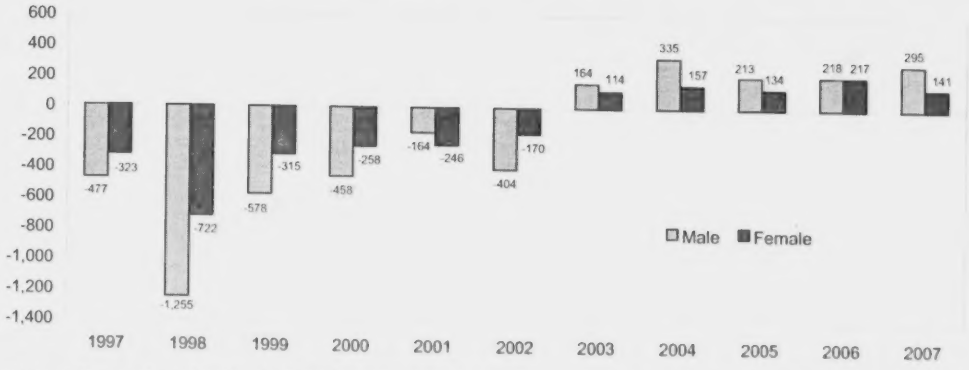
Average Turnover (Immigration plus Emigration) by Age, Yukon, 1997 to 2007



People in younger age groups are also more mobile. Average annual turnover from 1997 to 2007 shows that fewer people in age groups 55–64 and 65+ were moving into or out of the Territory. The age group with the highest average annual turnover was the 25–34 year-old age group (1,737).

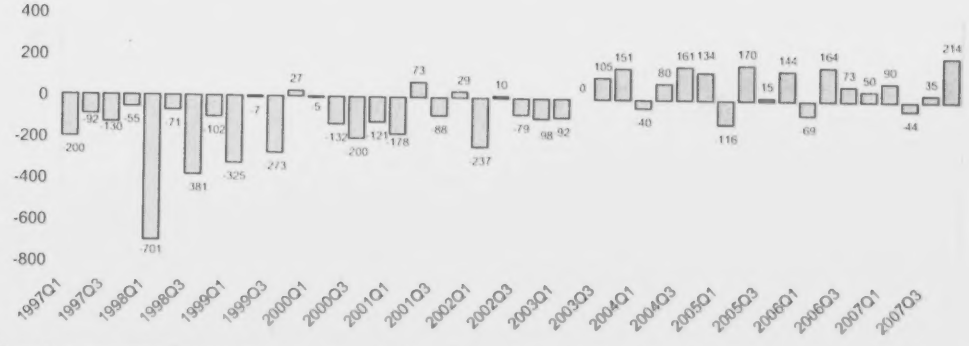
Migration by Sex

Net Migration by Sex, Yukon, 1997 to 2007



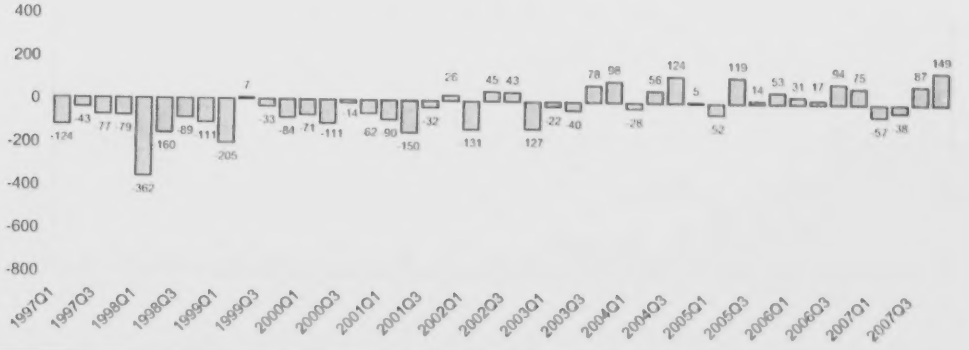
The pattern of net migration is similar for males and females, although males are more mobile, exceeding females in migration in each year except 2001. From 1997 to 2007, average annual net migration was -192 for males and -116 for females. In 2007, net migration for both males and females was positive, following a trend that started in 2003.

Net Migration, Males, Yukon, 1997 to 2007



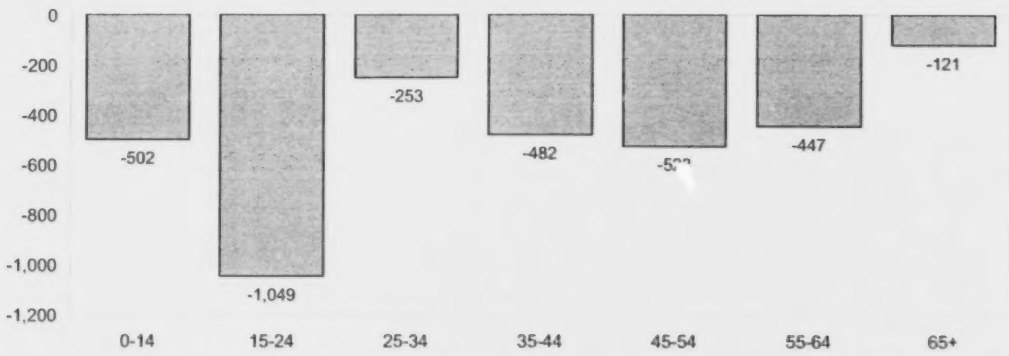
Net migration patterns by quarter are also similar for males and females, although in some quarters net migration for females exceeded net migration for males. From 1997 to 2007, average **quarterly** net migration was -48 for males and -29 for females.

Net Migration, Females, Yukon, 1997 to 2007



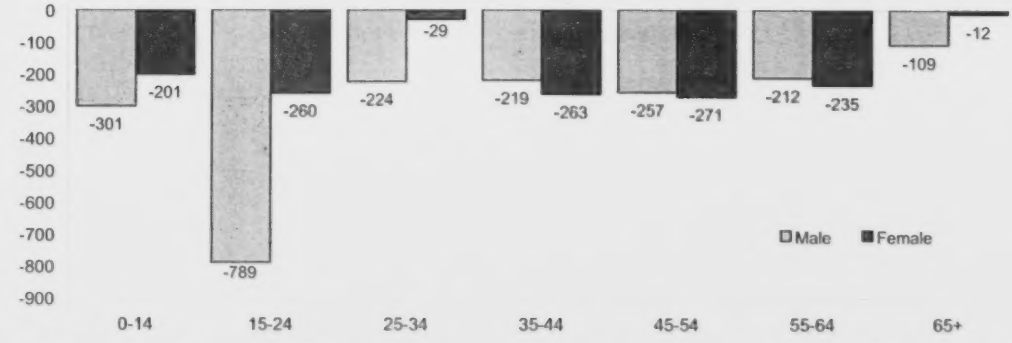
Migration by Age

Net Migration by Age, Yukon, 1997 to 2007



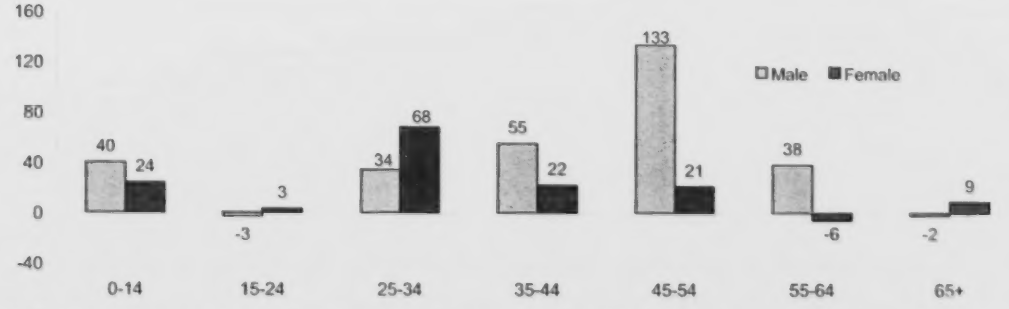
Net migration by age group shows that all age groups decreased between 1997 and 2007. From 1997 to 2007, the age group with the largest decrease in terms of net migration was the 15–24-year-old age group (-1,049).

Net Migration by Age and Sex, Yukon, 1997 to 2007



All male and female age groups showed a net loss in terms of net migration between 1997 and 2007. The pattern of net migration by age shows that the Yukon lost more males than females in the youngest and oldest age groups between 1997 and 2007. The reverse was true for the age groups between 35 and 64.

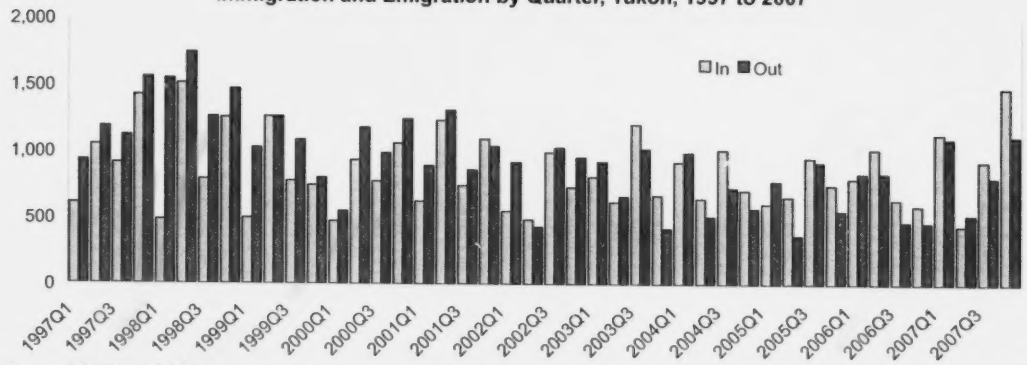
Net Migration by Age and Sex, Yukon, 2007



In 2007, net migration by age was positive for both sexes in all age groups, with the exception of 15-24 and 65+ males, and 55-64 females. The age group with the largest positive net migration was the 45–54-year-old category, with 133 males and 21 females.

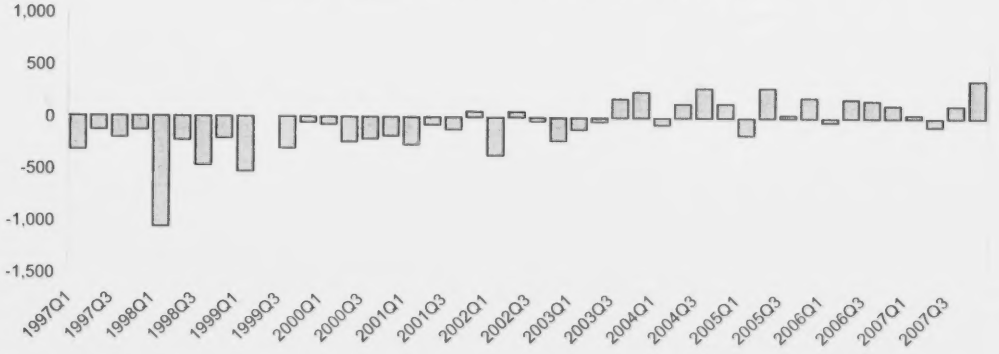
Migration by Quarter

Immigration and Emigration by Quarter, Yukon, 1997 to 2007



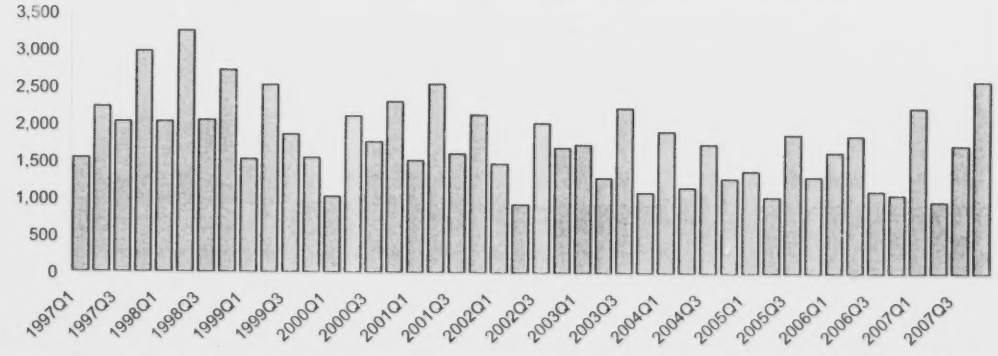
From 1997 to 2007, average quarterly immigration for the Yukon was 857 and average quarterly emigration was 918. In the second quarter of 2007, more people moved out of the Territory than into it. In the other three quarters of 2007, this trend was reversed and more people moved into the Territory than moved out.

Net Migration by Quarter, Yukon, 1997 to 2007



Since 1997, net migration has been positive in 16 quarters and negative or zero in 28 quarters. From 1997 to 2007, average quarterly net migration for the Yukon was -77. Net migration reached a high of 363 in the fourth quarter of 2007, and a low of -1,063 in the first quarter of 1998.

Turnover (Immigration plus Emigration) by Quarter, Yukon, 1997 to 2007

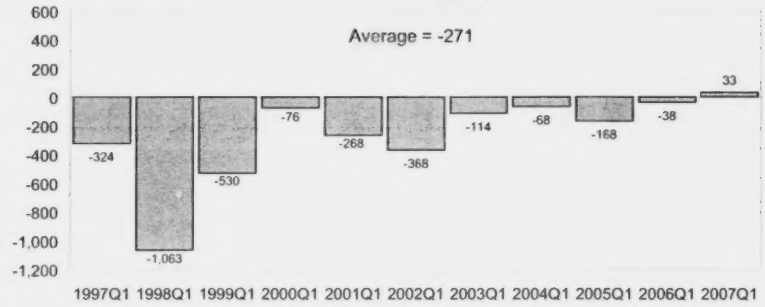


From 1997 to 2007, the average quarterly turnover was 1,785. Turnover reached a high of 3,255 in the second quarter of 1998 and a low of 919 in the second quarter of 2002.

Migration by Quarter cont.

Net Migration by Quarter, Yukon, 1997 to 2007

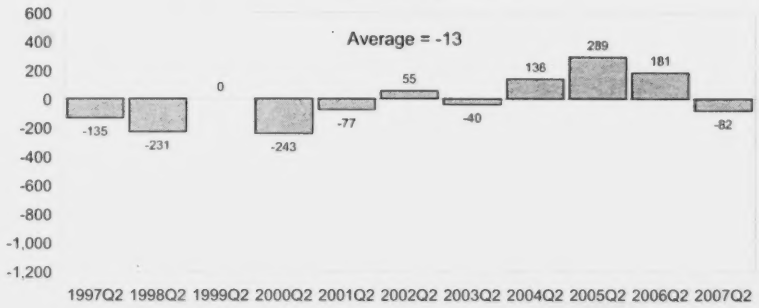
First Quarter



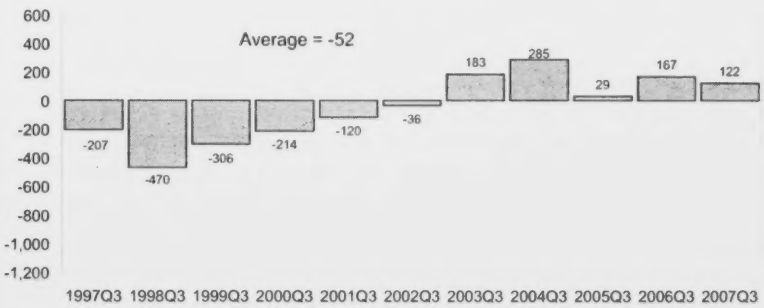
Data from 1997 to 2007 show that average immigration to the Yukon during the first quarter was 682 and average emigration from the Yukon was 953, resulting in an average net migration of -271. This was lower than any other quarter.

Second Quarter

Data from 1997 to 2007 show that average immigration to the Yukon during the second quarter was 897 and average emigration from the Yukon was 910, resulting in an average net migration of -13.



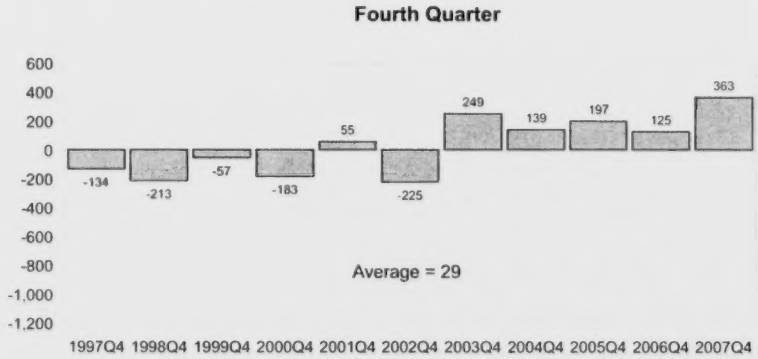
Third Quarter



Data from 1997 to 2007 show that average immigration to the Yukon during the third quarter was 883 and average emigration from the Yukon was 935, resulting in an average net migration of -52.

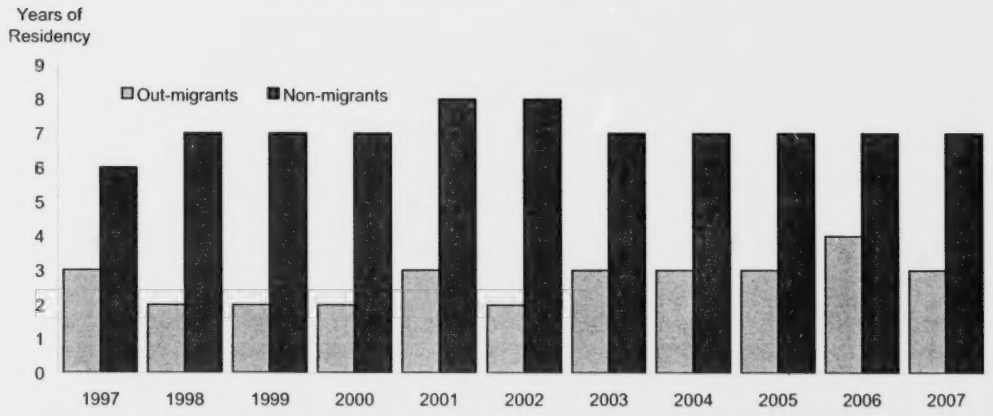
Fourth Quarter

Data from 1997 to 2007 show that average immigration to the Yukon during the fourth quarter was 955 and average emigration from the Yukon was 926, resulting in an average net migration of 29. The fourth quarter was the only quarter with an positive average net migration over this period.



Median Length of Residency

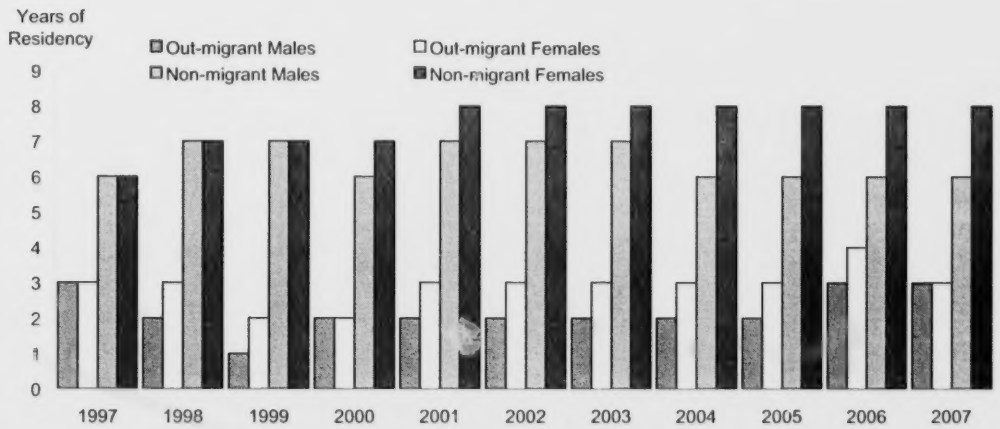
Median Length of Residency (Years), Yukon, 1997 to 2007



In 2007, the median length of residency for out-migrants (those who moved out of the Yukon during the year) was three years. This figure was down by one year since 2006.

In 2007, the median length of residency for non-migrants (those who remained resident in the Yukon during the year) was seven years. The median length of residency for non-migrants increased steadily from 1997 to 2002. It fell by one year in 2003, and subsequently remained steady at seven years to 2007.

Median Length of Residency (Years), by Sex, Yukon, 1997 to 2007

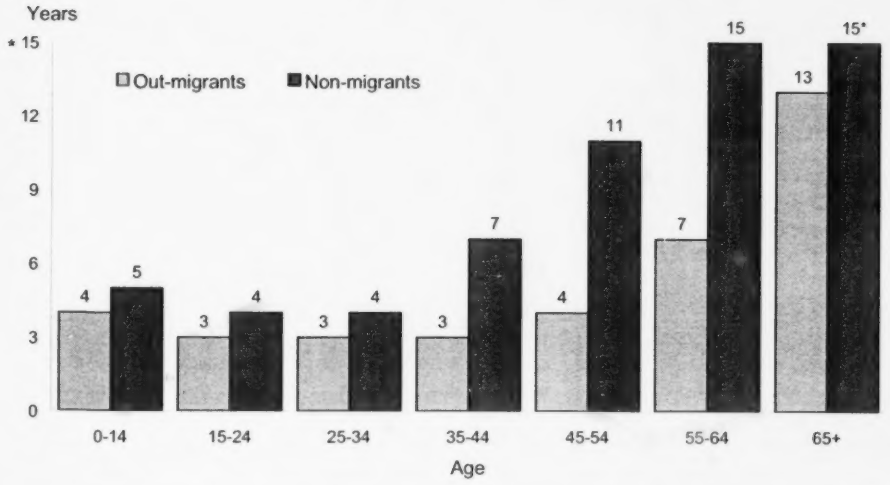


From 1997 to 2006, the median length of residency for out-migrant males and out-migrant females showed that males were slightly more mobile than females. However, in 2007, the median length of residency for both out-migrant males and females was the same at three years.

Non-migrant males and non-migrant females also have similar migration patterns. In 2007, the median length of residency for non-migrant males was six years, and eight years for females.

Median Length of Residency cont.

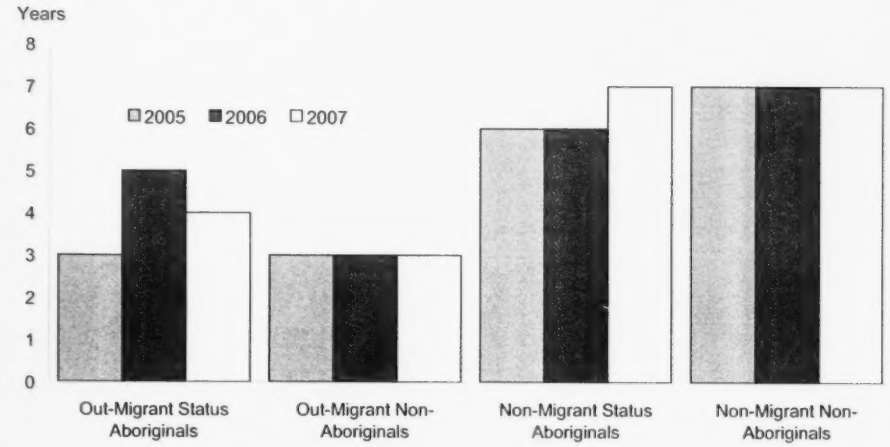
Median Length of Residency (Years), by Age, Yukon, 2007



* Refers to median length of residency as 15 or more years. Data after fifteen years is limited by the Yukon Health Care Registration file.

The median length of residency for out-migrants and non-migrants increases with age (with the exception of the 0-14 year-old age group). People in younger age groups are more mobile than people in older age groups. In each age group, out-migrants are more mobile than non-migrants. In 2007, the median length of residency for non-migrants aged 55 and over was 15 or more years.

Median Length of Residency (Years), by Ethnicity, Yukon, 2005 to 2007

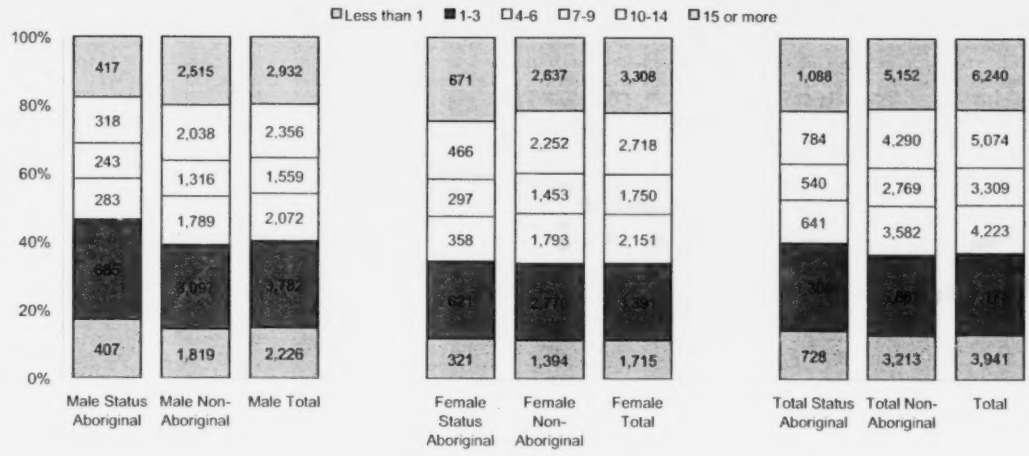


In 2007, the median length of residency for Aboriginal out-migrants and non-Aboriginal out-migrants showed that Aboriginals were less mobile than non-Aboriginal out-migrants. In 2007, the median length of residency for Aboriginal out-migrants was four years and non-Aboriginal out-migrants was three years.

In 2007, the median length of residency for both Aboriginal non-migrants and non-Aboriginal non-migrants was seven years.

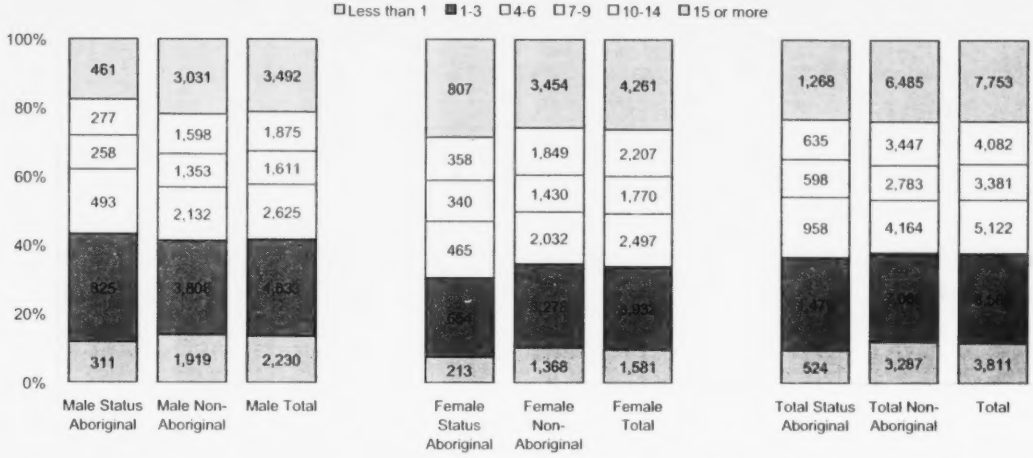
Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2002



The 15 years or more group increased by 1,513 people, or 24.2%, when comparing 2002 to 2007. The largest decrease was in the 10-to-14-year residency group, which decreased by 992 people, or 19.6%. Comparing 2002 to 2007, there was a 3.3% decrease in the number of people whose continuous length of residency was less than one year, indicating that fewer people are immigrating to the Yukon.

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2007



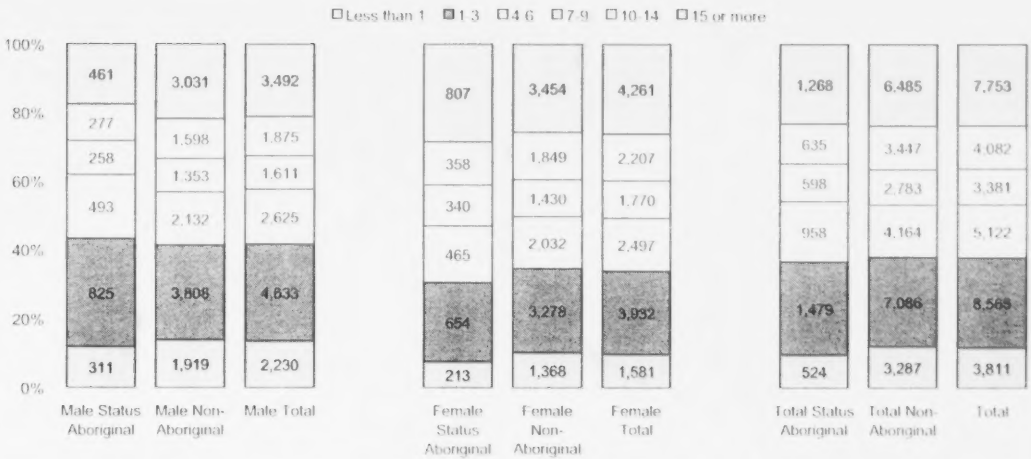
In 2007, there was no significant difference between the percentage of status Aboriginals (23.2%) in residency group '15 or more years' when compared with non-Aboriginal residents (23.8%). There is a larger percentage of females (26.2%) in residency group '15 or more years' when compared with male residents (21.2%). This indicates that females are slightly less mobile than males.

Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2002

The 15 years or more group increased by 1,513 people, or 24.2%, when comparing 2002 to 2007. The largest decrease was in the 10-to-14-year residency group, which decreased by 992 people, or 19.6%. Comparing 2002 to 2007, there was a 3.3% decrease in the number of people whose continuous length of residency was less than one year, indicating that fewer people are immigrating to the Yukon.

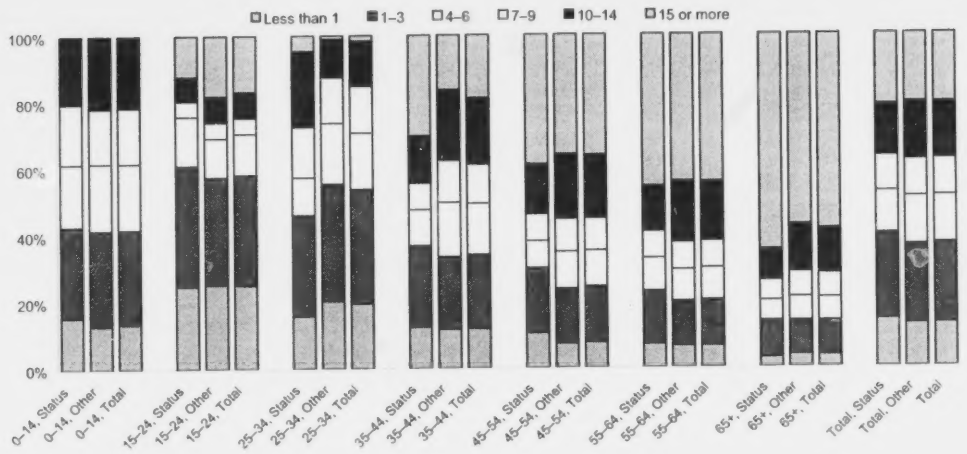
Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2007



In 2007, there was no significant difference between the percentage of status Aboriginals (23.2%) in residency group '15 or more years' when compared with non-Aboriginal residents (23.8%). There is a larger percentage of females (26.2%) in residency group '15 or more years' when compared with male residents (21.2%). This indicates that females are slightly less mobile than males.

Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Age, Yukon, 2002



The length of continuous residency for status Aboriginals and non-Aboriginals generally increases with age. People in younger age groups are more mobile than people in older age groups. In 2007, 56.0% of residents 65 and older were continuous residents in the Yukon for 15 years or more.

The most mobile age group in 2007 in the Yukon was the 25-to-34-year-old age group. This group had the lowest percentage (1.9%) of people who have lived in the Yukon continuously for 15 or more years. The 25-to-34-year-old age group also had a high percentage of people who lived in the Yukon for less than one year (17.6%). Status Aboriginals were less mobile than non-Aboriginals in the 25-to-34-year-old age group and, to a lesser degree, the same held for the 35-to-44-year-old age group.

Comparing 2002 to 2007, the percentage of people who have lived in the Yukon continuously for 15 or more years increased in each age group except the 45-to-54- and 65+ age group.

Length of Continuous Residency (Years), by Ethnicity and Age, Yukon, 2007

Notes: '15' refers to median length of residency as **fifteen or more** years. Data after fifteen years are limited by the Yukon Health Care registration file.

These data were generated by comparing January 1st populations in successive years. Anyone who is in both datasets is considered a non-migrant. Anyone who moved out and moved back in within a single calendar year is counted as a non-migrant. Those who were in the population dataset on January 1st of a given year and not in the dataset on the following January 1st are counted as out-migrants.

'Median length of residency' refers to the value at which one-half of the residency lengths are higher and one-half are lower. This middle point is a better indicator of length of residency than an 'average' length would be.
